

Introducing
mi-eye 2™

Arthroscopy in the palm of your hand

Combining a camera, light source, and access needle into an assembled, single-use device, mi-eye 2™ is an imaging solution that enables surgeons to easily visualize intra-articular joint space on an HD Microsoft tablet – with striking precision.*

- HD Screen
- 10.8-inch display
- Live video with playback
- Save and share images and video
- 1.6GHz Intel Atom processor
- Go-anywhere portability

+ Covered by most major insurance carriers, including Medicare

*Claim based on the 120° field of view and 35mm depth of field provided by mi-eye 2™.

Gain a powerful perspective

A wide, **120° viewing angle** empowers doctors with the expanded perspective they need to visualize and confirm joint injuries. An MRI can be a prohibitive procedure. Patients with metal implants, claustrophobia, and even orthodontic braces may not qualify for an MRI. mi-eye 2™ is for everyone.

The ultimate tool for surgeons

Now, physicians can provide realtime analysis, effect faster treatment, and schedule patients for surgery immediately – resulting in quicker outcomes for patients and a more efficient process for doctors. That is the power of mi-eye 2™.

- **120° field of view**
- **5—35mm depth of field**
- **Retractable 2.26mm needle**
- **Image and video capture**
- **Integrated optic and light source**
- **Ergonomic handle for one-handed/ambidextrous use**

The future of visualization has arrived

Microsoft and Trice Medical are proud to present the Trice Tablet. Its large, HD screen displays direct visualization from mi-eye 2™ with striking precision. The performance of the Trice tablet puts the indirect visualization of an MRI to shame.*

Featuring
+ CLARI.FI

Introducing all-new CLARI.FI technology, designed to provide surgeons with a level of clarity and fine detail never before seen in the office environment.*

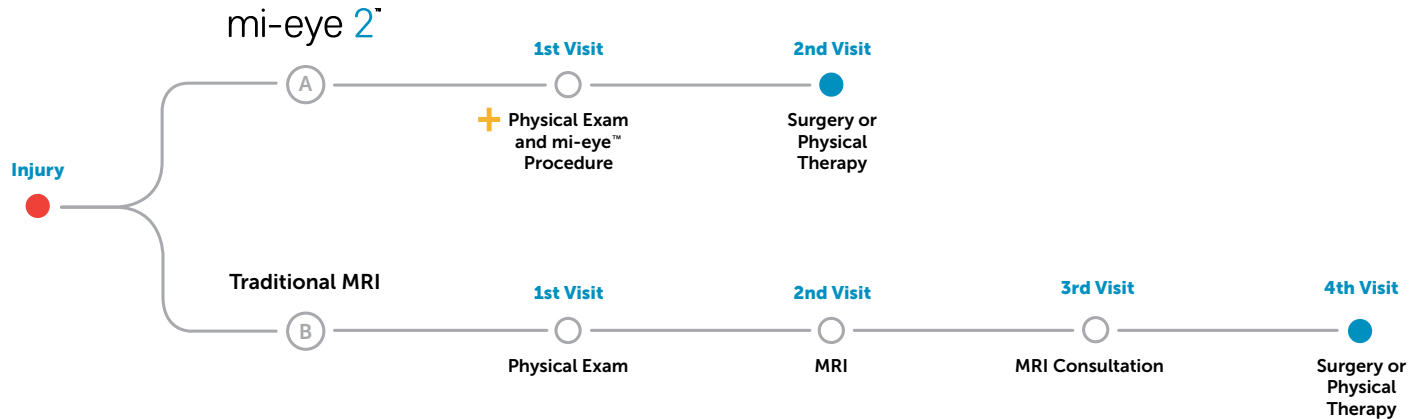

*Claim based on the 120° field of view and 35mm depth of field provided by mi-eye 2™.

The real value of a streamlined procedure

+

The future of visualization has arrived. Before mi-eye 2™, the diagnostic process took up to three visits before surgery or PT. Today, physicians can provide realtime analysis, and schedule patients for treatment after just one visit; getting them on the road to recovery faster. That is the power of mi-eye 2™.

FDA INDICATION FOR USE

mi-eye 2™ is indicated for use in diagnostic and operative arthroscopic and endoscopic procedures to provide illumination and visualization of an interior cavity of the body through either a natural or surgical opening.

FAQs

PROCEDURE

How long does the typical mi-eye™ procedure take to perform?

The typical mi-eye™ procedure takes less than five minutes to perform. In some cases, pathology is visualized immediately depending on what you are looking for specifically in the joint.

How will the integration of mi-eye™ affect my practice-flow?

Trice Medical has effective best practices that can result in no interruption to your normal practice flow. Additionally, our Clinical Specialists will work with your practice to ensure the smoothest integration of mi-eye technology.

What is the cost of additional supplies for my practice?

Based on common unit costs of the required supplies, a total cost per patient can be expected to be less than \$15 per patient.

Who are the ideal mi-eye™ patients?

mi-eye™ is ideal for patients that are not candidates for an MRI such as those with claustrophobia, pacemakers, metal implants or anxiety. In addition, mi-eye™ is ideal for patients that want an immediate answer to what is causing their pain.

Do patients have any issues tolerating a 2.2mm-gauge needle?

Patients have tolerated the procedure very well, with most reporting little to no pain. It is important to note that every patient is different, and pain may be variable. We recommend an injection of local anesthetic prior to the mi-eye™ procedure to help eliminate any unnecessary pain or discomfort.

REIMBURSEMENTS

Will there be a reduction in reimbursement if I take a patient to surgery after mi-eye™?

If pathology that requires surgical intervention is discovered using mi-eye™, your billing office can add the -58 modifier to the diagnostic code. This modifier will allow for reimbursement of all activities that occur during the 90-Day Global Period.

Do I need to get a pre-authorization before performing a mi-eye™ procedure?

Prior-authorization is not a guarantee of payment. However, validated mi-eye™ procedural history has indicated that prior authorization is patient and plan dependent.

More Information

The following CPT codes are used for mi-eye™ billing:

- 29805 - Shoulder Arthroscopy Dx
- 29830 - Elbow Arthroscopy Dx
- 29840 - Wrist Arthroscopy Dx
- 29870 - Knee Arthroscopy Dx
