Jumpstart the healing process
Reduce the number of appointments and time at the doctor’s office with mi-eye and get back to your team, gym, and life faster.

mi-eye Patient Testimonials

“It’s a lot cheaper, easier and pain free”

Heather Skeen
Winston-Salem, NC USA

“mi-eye saved me money and time”

Jason Shultz
Atlanta, GA USA

“MRI or mi-eye? mi-eye all the way”

Detective Raymond Blohm
Philadelphia, PA USA

individual costs and results may vary

There is an alternative to the MRI

A revolutionary orthopedic solution that gives your doctor a clear visualization of your injury, providing you with a diagnosis – in just one office visit.

40 General Warren Blvd, Suite 100 | Malvern, PA 19355 U.S.A.

mi-eye is an in-office diagnostic arthroscopy that allows for immediate answers to your pain.

Unlike a traditional diagnostic arthroscopy, the mi-eye procedure is done while you remain awake using a local numbing of the joint. The needle and camera design streamlines the procedure allowing you to get answers to your joint pain in the first office visit.

**How it Works**

- Your doctor will clean and sterile prep the procedure site. Patients with an active infection should not have a mi-eye procedure.
- Local anesthetic is provided to numb the skin and surrounding area to reduce pain.
- Once the joint is numb, your doctor will re-prep the area and insert the mi-eye into the joint.
- During the procedure, your doctor will examine your joint for possible injuries giving you a real-time view and diagnosis with little to no pain.
- After the procedure, the area is covered with a bandage and you are able to return to normal activities with an immediate answer and established treatment plan for your joint pain.

Get back to your active life 2 weeks sooner* with a mi-eye than a traditional MRI
