

There is
an alternative
to the MRI

mi-eye™

A revolutionary orthopedic solution that gives your doctor a clear visualization of your injury, providing you with a diagnosis – in just one office visit.

Jumpstart the healing process

Reduce the number of appointments and time at the doctor's office with mi-eye and get back to your team, gym, and life faster.

mi-eye is an in-office diagnostic arthroscopy that allows for immediate answers to your pain.

mi-eye is indicated for use in diagnostic and operative arthroscopic and endoscopic procedures to provide illumination and visualization of an interior cavity of the body through either a natural or surgical opening. mi-eye is available for prescription use only.

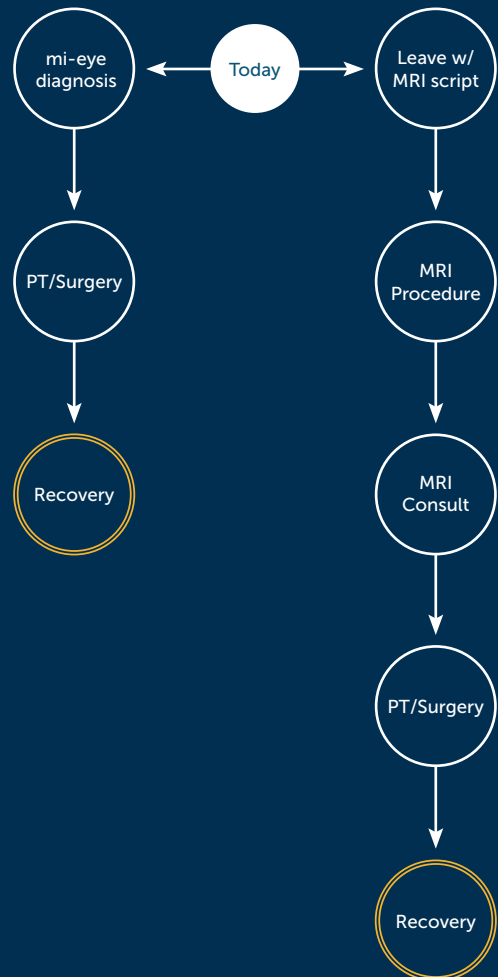

Unlike a traditional diagnostic arthroscopy, the mi-eye procedure is done while you remain awake using a local numbing of the joint. The needle and camera design streamlines the procedure allowing you to get answers to your joint pain in the first office visit.

How it Works

- + Your doctor will clean and sterile prep the procedure site. Patients with an active infection should not have a mi-eye procedure.
- + Local anesthetic is provided to numb the skin and surrounding area to reduce pain.
- + Once the joint is numb, your doctor will re-prep the area and insert the mi-eye into the joint.
- + During the procedure, your doctor will examine your joint for possible injuries giving you a real-time view and diagnosis with little to no pain.
- + After the procedure, the area is covered with a bandage and you are able to return to normal activities with an immediate answer and established treatment plan for your joint pain.

The mi-eye procedure is covered by most major insurance carriers, including Medicare.

Get back to your active life 2 weeks sooner* with a mi-eye than a traditional MRI

*Based on estimated time-frame from radiology testing and results, including follow-up consultation.

mi-eye Patient Testimonials

*"It's a lot cheaper,
easier and pain free"*
